

Summary of Day

- Introduction to AI
- Types of Learning
- Optimization in ML
- Gradient Descent Algo.
- Regressors
- Python, Sklearn
- Implement Regressors
- Supervised/Unsupervised algo. With Sklearn

Algorithmic Programming

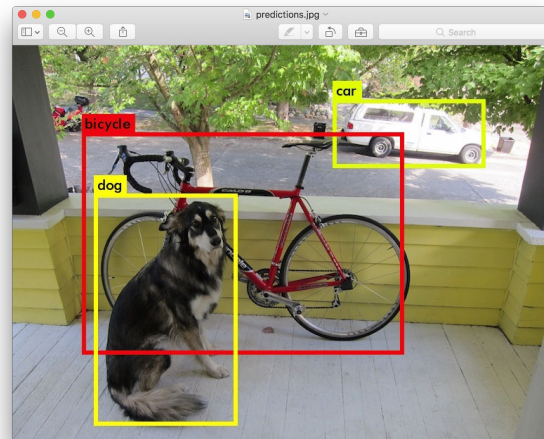

?

What if?

**ROBOT
DJ**

Input text

The next planet was inhabited by a tippler. This was a very short visit but it plunged the little prince into deep dejection.

Synthesized result

The next planet was inhabited by a tippler. This was a very short visit, but it plunged the little prince into deep dejection.

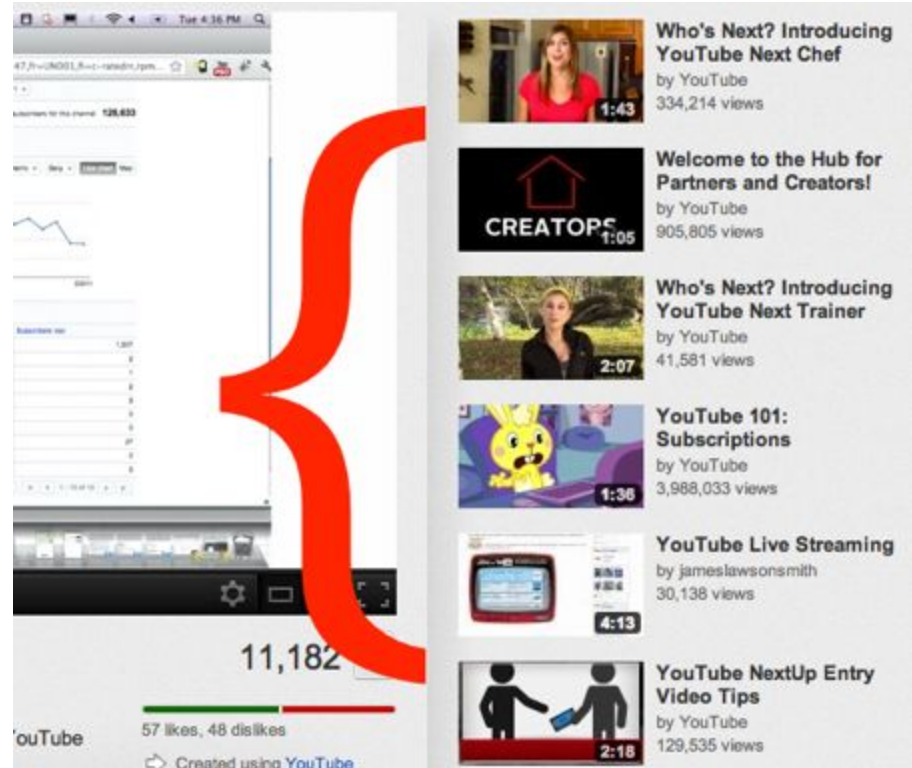

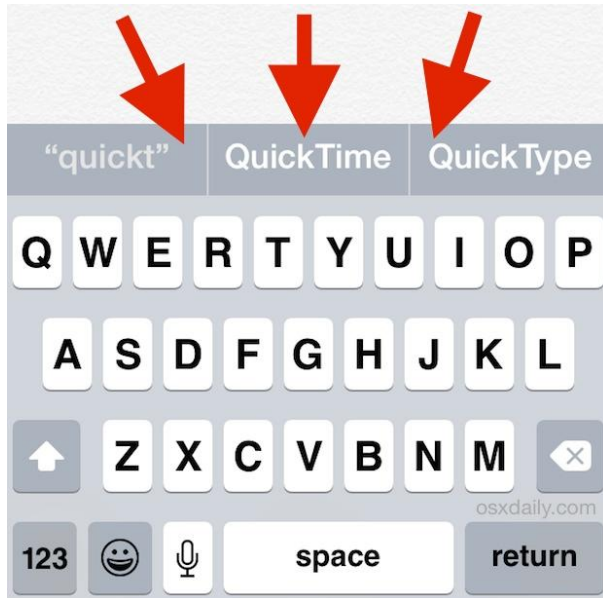

What if?

- Data Security
- Financial Trading
- Healthcare
- Fraud Detection
- Recommendations
- Online Search

What if?

- Keyboard Suggestion
- YouTube recommendation

A large red square with a white border, centered on a white background. Inside the square, the text "AI" and "Artificial Intelligence" are written in white.

AI

**Artificial
Intelligence**

ARTIFICIAL INTELLIGENCE

Early artificial intelligence stirs excitement.

MACHINE LEARNING

Machine learning begins to flourish.

DEEP LEARNING

Deep learning breakthroughs drive AI boom.

1950's

1960's

1970's

1980's

1990's

2000's

2010's

Since an early flush of optimism in the 1950s, smaller subsets of artificial intelligence – first machine learning, then deep learning, a subset of machine learning – have created ever larger disruptions.

Areas of AI

- Machine Learning
- Deep learning
- Computer Vision
- Natural Language Processing (NLP)
- Medical Imaging
- Games
- Security,

**Installation, Prerequisites materials, &
Clone Repository.**

Machine Learning

- **Machine learning** is an application of artificial intelligence (AI) that provides systems the ability to automatically learn and improve from experience without being explicitly programmed.
- **Machine learning** focuses on the development of computer programs that can access data and use it learn for themselves.

Types of ML algorithm

- Supervised learning
- Unsupervised Learning
- Semi-supervised Learning
- Reinforcement Learning
- Transfer Learning

Supervised algorithms

- Nearest Neighbor, Naive Bayes, Decision Trees, Linear Regression, Support Vector Machines (SVM), **Neural Networks**,...

Unsupervised algorithms

- k-means clustering, Association Rules, Autoencoders, Adversarial Networks, few NN, ...

Optimization in ML
